

Dear fosstheory,

I hope this message finds you well. I wanted to provide you with some important details regarding our project:

For the development of the app, we utilized Flutter (version: 3.3.10), a powerful and versatile framework for creating cross-platform applications.

As for the backend, we employed Laravel, a robust PHP framework known for its efficiency and scalability in building web applications.

To ensure the security of your app, please note that the password for all the JKS (Java KeyStore) files is set as 888287. Additionally, the key alias is "key0".

If you have any further questions or need assistance with these details, please don't hesitate to reach out. We are committed to delivering a successful project and are here to support you every step of the way.

Thank you for your continued trust and collaboration.

Best regards,
Sqaby Technologies
